BENTEL SECURITY

Bentel Security was founded in 1983 in Grottammare, Italy and moved to Corropoli in 1994. Global demand for its superior product line grew, and in 1998 Bentel joined forces with DSC to bring the world the finest security product line-up ever offered. In 2001, a veritable intrusion security powerhouse was formed, as Bentel became a brand within TYCO Fire & Security along with DSC, Sur-Gard and several other complementary brands. Bentel now offers the best value in a very complete line-up of security and fire prevention products.

ADVANCED TECHNOLOGY & SUPERIOR VALUE

Experience, technology, market responsiveness and extensive research have made Bentel the brand of choice among customers wishing to ensure the highest level of protection for families, business people and property.

Hundreds of thousands of Bentel security & fire systems are in use around the corner and around the world. These include installations in hospitals, banks, manufacturing facilities, shopping centres, public buildings, museums and in residential applications far and wide.

Products include security control panels, fire control pads, keypads and other user interfaces, security programming software, alarm communication receivers, mobile phone interfaces, telephone dialers, alarm sirens, smoke detectors, motion detectors, glass-break detectors, analogue sensors, addressable devices, call points, power supplies, accessories and batteries.

DISTRIBUTOR PARTNERSHIPS

Bentel supplies its superior product to world-wide markets through a sophisticated & professional distribution network. We pride ourselves on fully supporting distributors in their efforts to provide superior service to their installer customers. Distributors know they can rely on Bentel product quality, technological superiority and a business model that favours our valued partners in the industry. When they post the Bentel sign on their door, they know they can immediately expect more satisfied customers to walk through it.

TECHNICAL SUPPORT

Installers quickly discover how simple it is to build their businesses with easy-to-sell, easy-to-install and easy-to-use Bentel products. The Bentel web site and qualified Bentel technical specialists offer incomparable on-the-job support for professional Bentel technicians. Professional installation and programming is fast and intuitive. Because Bentel products must meet strict high quality standards, call-backs are minimal, except when customers wish to buy more Bentel equipment.

INNOVATION

In the technology age the world is changing quickly. Seasoned Bentel engineers discriminate carefully between practical advanced solutions and flashy unsustainable trends. In order to satisfy the changing needs of customers, Bentel has developed increasing connectivity for its products; for example, adding to communications capability through TCP-IP protocols and transmission through Ethernet and GSM/GPRS networks. More exciting innovations are on the way as Bentel benefits from increased research and development resources.

QUALITY ASSURANCE

To ensure quality control we perform parametric and functional tests on every board, and follow strict ISO 9001 testing procedures. Product controls and continuous monitoring are in place in all production phases. Our manufacturing facilities are among the most modern in the world and our association with sister companies in other countries means we benefit from an unparalleled depth of engineering & production expertise.

Over the course of 20 years Bentel has risen to the highest levels in the security business, establishing formidable industry performance benchmarks. We attribute success to highly qualified personnel, quality components, product innovation and continuous improvement. This results in advanced security products which are also reliable, flexible, and easy-to-use. It also results in very loyal Bentel partners and customers.

BLUSHIELD system: simplifying life

From Bentel technological research, a new security system against electromagnetic pollution for Bentel Control panels. Its special screen protects the system from false alarms and useless bothers.

Easy to install, easy to forget, easy life with BLUSHIELD.

Thanks to Blushield technology, once a security system has been installed, it can be easily forgotten.

This is the aim of Bentel Security: to make users' and installers 'life easier and safer.

REINVENTING CONTROL PANEL

The perfectly-blended alliance of winning features makes the KYO generation of control panels unique. This innovative concept of control panel design is the fruit of 20 years expertise, attentive research and installer perception.

Value-driven technology, respect for our heritage, reduced complexity, complete custom peripheral line-up, intersystem communication, excellence of our tailored solutions, and focus on diverse market segments make KYO a breakthrough product beyond all expectations.

From 4 to 312 zones- from small domestic to large industrial applications- KYO speaks one language, the language of "All-the-way-through" solution.

From now on installers can forget the pains of learning the complex procedures and intricate software programs of myriad of different systems. The KYO range embraces the entire panorama of security applications.

KYO

The reduced complexity firmware and software structures allow trouble-free programming without the aid of the installer manual.

KYO has solutions to satisfy all the market segments. With KYO large applications are nothing more than small applications on a bigger scale.

The KYO project control panel eliminates application differences by providing perfectly tailored solutions.

The project now includes 6 models: KYO 4, KYO 8, KYO 16D, KYO 32, KYO 100 and KYO 300; obviously we see more growth ahead, so we are still on the move, keeping up with the complexities of future technologies and expectations. That is what makes KYO the shape of models to come.

KYO

Programming of KYO control panels can be done in an extremely simple way through control keypads and easy to follow menu or by means of useful programming software contained in Bentel Security Suite.

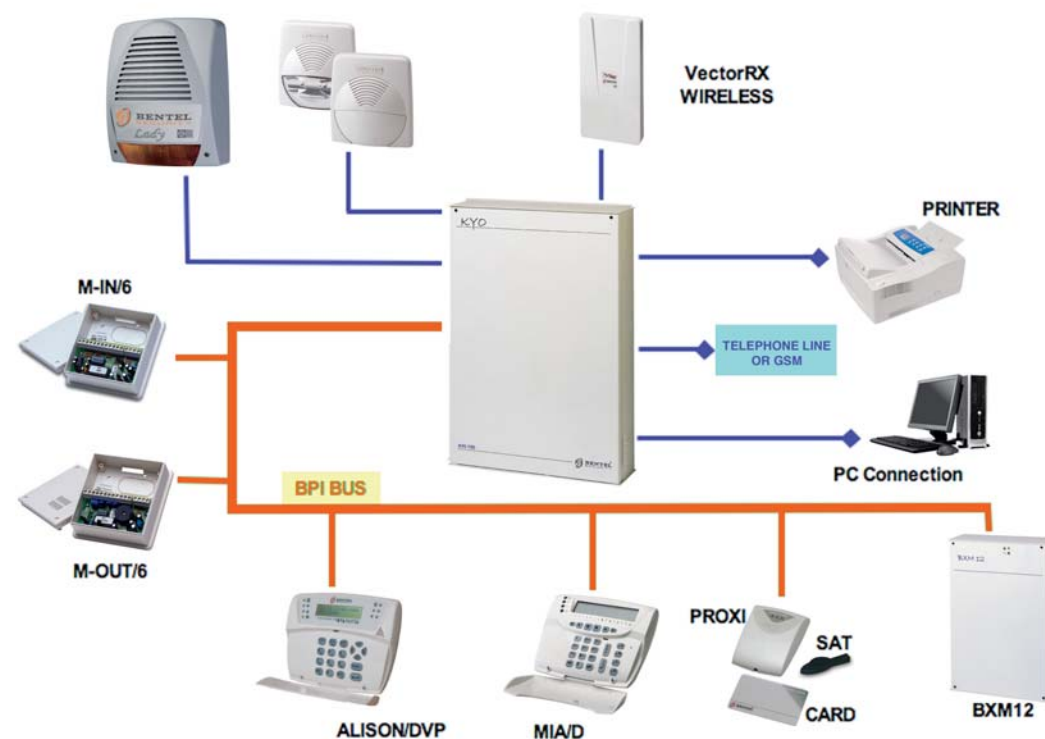

In both ways programming is easy and immediate and there is no need of any technical instructions.

6

Once you know one KYO control panel, you know them all.

Even if each model has its own features, all of them share the same way of programming and installation: 4 wires BPI bus is a great and simple mean to connect keypads, input and output expansion modules, proximity readers, electronic keys and additional power supplies.

7

KYO 300 - KYO 100

The KYO 300 and KYO 100 are the flagship models of the KYO range. Their flexibility and excellence of tailored solutions make them truly unbeatable. They are is the perfect solution for all applications. From the luxury home to the Bank — and everything in between. With the creation of the KYO 300 and KYO 100 Bentel wishes to consolidate its position as forerunner in the design and manufacture of security panels.

The KYO 300 has 8 zones, expandable to 312 zones by means of 32 expander modules (6 inputs per module), 32 LCD keypads (2 zones per keypad), 16 LED keypads (1 zone per keypad) and a wireless receiver (32 inputs).

The KYO 100 has 8 zones, expandable to 168 zones by means of 16 expander modules (6 inputs per module), 16 LCD keypads (1zones per keypad), 16 LED keypads (1 zone per keypad) and a wireless receiver (32 inputs).

PROGRAMMING

All zones are fully programmable: the zone type, attributes and balance type (7 balance types are available) can be programmed as per requirements.

The standby, alarm and tamper threshold values of the zones can be programmed to provide "High Security" applications with the maximum level of protection.

The system can be divided into 32 independent partitions for KYO 300 and 16 for KYO 100 all with stay/away control (stay mode can be activated with or without entry delay).

All peripherals can be connected to the 4-wire serial bus. The system can be controlled from LCD keypads, LED keypads or, on reader enhanced systems, via digital keys or proximity cards. The easy-to-follow "Tree-view" menus allows the installer to program the system without the aid of the installer manual. The KYO 300/KYO 100 is equipped with a multi-protocol digital dialler that manages 50 telephone numbers for central station communications.

SPECIAL APPLICATIONS

K3/VOX voice board enhanced systems can manage 62 voice messages, in cascade, for a total message time of 8 minutes. The KYO 300/KYO 100 scheduler can be programmed on a daily, weekly or Yearly basis. The scheduler can be programmed to arm/disarm the 32 partitions and enable/disable outputs, user codes, digital keys and proximity cards. The system can also be controlled from remote DTMF telephone. The K3/PRT printer board (optional) provides selective and continuous printouts of events.

ORDER CODES

- KYO300

8 zones control panel, expandable to 296 zones. Equipped with 5A Switching power supply and "multischeduling" timer. Metal box.
- KYO100

8 zones Control panel, expandable to 168 zones. Equipped with 3,5A Switching power. Metal box.

FEATURES

- 8 programmable zones - expandable to 312
- 24h balanced tamper zone
- 3 supervised outputs - 3A free-voltage relay (mod. KYO 300)
- 2 supervised outputs - 3A free-voltage relay (mod. KYO 100)
- 3 programmable 1A open-collector outputs
- Supports up to 32 6-zone remote expander modules (mod. KYO 300)
- supports up to 16 6-zone remote expander modules (mod. KYO 100)
- Expandable to 118 outputs - via 16 remote expander modules (6 outputs each) and 16 LED keypads (1 output each for mod. KYO 300) - 116 outputs for mod. KYO 100
- Supports up to 32 LCD keypads, 2 zones per keypad (mod. KYO 300)
- supports up to 16 LCD keypads, 1 zone per keypad (mod. KYO 100)
- Supports up to 32 key/card readers (mod. KYO 300) - 16 key/card readers (mod. KYO 100)
- Supports up to 16 LED keypads, 1 zone and 1 open collector output per keypad
- Supports up to 32 wireless devices via wireless receiver VECTOR/RX
- Accepts up to 16 4-button wireless keys via wireless receiver VECTOR/RX
- 32 independent partitions - all with stay/away control for mod. KYO 300
- 16 independent partitions - all with stay/away control for mod. KYO 100
- 7 zone balance types
- Programmable threshold values for all inputs
- Fixed or oscillatory option for each output with programmable oscillation type
- 200 user codes for mod. KYO 300
- 100 user codes for mod. KYO 100
- 16 programmable user code types
- Programmable arming modes for each key reader
- 4 Programmable arming modes for each code
- 2 Programmable arming modes for each reader
- Manages 500 keys and/or proximity cards
- 10.000 event logger with date and time for mod. KYO 300
- 1500 event logger with date and time for mod. KYO 100
- Each zone with own power terminals
- 5A switching power supply
- 4-wire double branch BPI bus
- Supports ECLIPSE and PROXI readers
- At-a-glimpse viewing of partition status on all keypad displays
- "Negligency" time management for each partition
- Delinquency management for each
- All partitions with own zones, keypads, readers, codes, keys, zone, cards, outputs and times
- Partitions can be armed in stay or away mode (stay mode can be activated with or without entry delay)
- 4 Arm/Disarm actions per day per partition - selected from 16 programmable day types
- Scheduler for automatic holiday management (as per programming)
- Overtime request management
- Scheduler with daily, weekly or yearly management
- Automatic control of outputs by means of 64 timers each with 4 on/off operations and 16 programmable day types
- Scheduler for automatic control of codes, digital keys and proximity cards
- Event filter
- Multi-protocol digital dialler
- Programmable test call
- Programmable callback
- Programmable double call
- Telephone line check
- 62 message voice dialler (requires optional K3/VOX voice board)
- Continuous recording (requires optional K3/VOX voice board)
- Recording quality option
- Voice driven menu via telephone line
- 50 telephone numbers for: telemonitoring, voice communications and teleservice
- Manages DTMF for full system management via DTMF telephones
- Main unit dimension (wxhxd): 339x488x108 mm
- Main unit weight (without battery): 5,55 kg

KYO 32

The KYO 32 control panel has 8 zones, expandable to 32 zones. Especially designed for luxury residence and commercial applications. The system can be expanded via hardwired or wireless expander modules.

KYO 32 has 8 independent partitions, all with stay/away control (stay mode can be activated with or without entry delay). All peripherals can be connected to the 4-wire serial bus. The KYO 32 can be controlled from LED or LCD keypads or, on reader enhanced systems, via digital keys or proximity cards. The first six Inputs of the KYO 32 accept vibration and roller-blind detectors (no Interface needed). The easy-to-follow "Tree-view" menu allows the installer to program the system without the aid of the installer manual. The KYO 32 is equipped with a multi-protocol digital dialler for central station communications. NC2/VOX board enhanced systems can manage up to 8 voice messages, for a total of 90 seconds message time, and up to 8 telephone numbers for digital or voice diallers. The VECTOR/RX receiver (optional) allows to manage up to 8 wireless zones and 16 wireless keys. The system partitions can be auto-armed independently on a weekly basis. The panels can also be controlled from remote DTMF telephone.

K32G

K32

FEATURES

- 8 programmable zones, expandable to 32
- 24h balanced tamper zone
- Supports up to 4 x 6-zone remote expander boards (optional)
- Supports up to 32 wireless zones via VECTOR/RX (optional)
- Supports up to 16 4-button wireless keyfobs via wireless receivers VECTOR/RX (optional)
- Available in metal or plastic box
- Available with power terminal for each zone (KY032G)
- 4 Balance type options per zone
- 1A Alarm relay
- 3x150mA programmable open-collector outputs (5x500mA outputs on KY032G model)
- Expandable to 16 outputs via 6-Output expander module
- Supports up to 8 keypads on the 4-wire BPI bus
- Supports LED and LCD keypads
- Supports up to 16 readers on the 4-wire BPI bus
- Supports ECLIPSE and PROXI readers
- 8 independent partitions all with stay/away control
- All partitions with own zones, keypads, readers, codes, keys, cards, outputs and times
- 2 programmable arming modes for each code and for each key reader
- Auto-arming on a weekly basis for each partition
- Patrol bypass with auto-UnBypass
- 24 user codes (from 4 to 6 digits)
- 256 event logger with date and time
- 6 inputs for direct management of vibration and roller-blind detectors
- Multi-protocol digital dialler
- Programmable test call
- Programmable callback
- Programmable double call
- Telephone line check
- 8 message voice dialler (requires optional NC2/VOX Voice board)
- 8 telephone numbers for: central station communications, voice calls and teleservice
- Manages DTMF for full system management via DTMF telephones

KYO 16D **NEW**

Designed to simplify.

The new performer Kyo16D is the latest addition to the Kyo family. Thanks to the development of intelligent functions and easy installation, the Kyo16D is the ideal solution for the market segment that requires an ultra-economical, reduced-complexity control panel providing the best in term of quality, reliability, performance and servicing.

This 6 zone control panel can be expanded by means of keypads and wireless zones. It supports 4 LED or LCD keypads (1 zone per keypad) and one VECTOR/RX8 wireless receiver (provides 8 zones) or VECTOR/RX wireless receiver (provides 16 zones for a wireless-zone only system). This control panel can "double" the 6 zones on the main board in order to allow each zone to detect two different alarm types (zone doubling feature). This feature permits the control panel to manage 12 different alarm signals, each managed individually - even with respect to the partitions. This "hibrid" control panel manages 16 hard-wired zones which can be partly or totally transformed into wireless zones.

Choosing yet another control panel from the KYO family has its advantages: the programming procedure is exactly the same all the way through the range and KYO16D, like the rest of the family, embraces an engineer-friendly philosophy that allows the installer to program the system with little or no need of the manual.

The KYO16D manages 4 partitions which in turn manage 4 independent sub-systems. It is equipped with a multi-protocol digital communicator (manages 8 telephone numbers) for all central station communications.

Designed to simplify, the KYO16D provides a cascade of high-tech functions at an interestingly low price. Value-driven technology at a price that is hard to resist.

FEATURES

- "Hybrid" control panel (hardwired and wireless zones)
- Up to 16 zone fully-programmable zones
- 6 zones on main board
- "Doubles" the 6 zones on the main (zone doubling, provides 12 zones)
- 2 zones for direct management of vibration and rollerblind detectors
- Up to 4 LED or LCD keypads (1 zone per LCD keypad)
- Up to 16 wireless zones using VECTOR/RX wireless receiver (8 for VECTOR/RX8)
- Up to 16 wireless keys zones using VECTOR/RX or VECTOR/RX8 wireless receiver
- Up to 8 proximity key/card readers
- Up to 128 proximity key/cards
- 1 alarm relay (1A) with connection supervision with siren
- 2 programmable open collector output (150mA)
- 4 independent partitions with stay or away arming (day/night mode)
- Auto-arming on a weekly basis for each partition
- 24 user codes (4 to 6 digits)
- 256 event memory with date and time details
- Multi-protocol digital communicator
- On board up-download modem for remote programming and management
- Dimension (wxhxd): 235x269x77mm
- Weight: 3 Kg (without battery)

KYO 8 - KYO 4

KYO 4 and KYO 8 are the smallest control panels of the range. KYO 4 has 4 zones and KYO 8 has 8 zones. Especially designed for small domestic to medium commercial applications, both systems provide the same functions, and have 4 completely independent partitions, all with stay/away control (stay mode can be activated with or without entry delay).

The system can be controlled from LED or LCD keypads or, on Reader enhanced systems, via digital keys and proximity cards. All the KYO 4 inputs, and six of the KYO 8 inputs accept vibration and roller-blind detectors (no Interface needed). Both systems can be programmed via LCD keypad or computer. The easy-to-follow "Tree-view" menu allows the Installer to program the systems without the aid of the Installer manual. Both control panels are equipped with multi-protocol digital diallers for all central station communications. NC2/VOX board enhanced systems can manage up to 8 voice messages, for a total of 90 seconds message time, and up to 8 telephone numbers for digital or voice diallers. The VECTOR/RX receiver (optional) allows the KYO8Wxx to manage up to 8 zones and 16 wireless keys. The KYO 8/4 partitions can be auto-armed independently on a weekly basis. The panel can also be controlled via remote DTMF telephone.

FEATURES

- 8 programmable zones (4 for KYO 4)
- 24h balanced tamper zone
- Up to 8 wireless inputs via VECTOR/RX remote receiver (K8W and K8GW only)
- Available in metal or plastic box
- Available in 8 zone version with power terminals for each zone (KYO 8Wxx)
- 4 balance type options per zone
- 1A Alarm relay
- 3 Programmable 150mA open-collector outputs (5 x 500mA outputs on KYO 8G)
- Supports up to 8 keypads on the BPI bus
- Supports LED and LCD keypads
- Supports up to 16 readers on the BPI bus
- Accepts ECLIPSE and PROXI readers
- 4 independent partitions — all with stay/away control
- All partitions with own zones, keypads, readers, codes, keys, cards, outputs and times
- 2 programmable arming modes for each code and for each key reader, with or without delay
- Auto-arming on a weekly basis for each partition
- Patrol bypass with auto-Unbypass
- 24 User codes (from 4 to 6 digits)
- 128 event logger with date and time
- 6 inputs (4 for KYO 4) for vibration and roller-blind detectors
- Multi-protocol digital Dialler
- Programmable test call
- Programmable callback
- Programmable double call
- Telephone line check
- 8 message voice dialler (requires optional NC2/VOX voice board)
- 8 telephone numbers for: central station communications, voice calls and teleservice
- Manages DTMF for full system management via DTMF telephones

KYO UNIT PROJECT

Maximize CHOICE.

The **UNIT** concept was created with customer participation to maximize installers satisfaction by ensuring that the right system configuration is always available while minimizing inventory costs. Having the flexibility to quickly and easily match the system's configuration to installation requirements, is an important strategic factor on how we approach our market. Doing this reduces the risk of not having the right type of cabinet, plastic or metal, or the needed size of control panel for the job.

Having the right system configuration on site reduces installation delays and costs by eliminating the need to source and install additional unplanned equipment. The result is a satisfied customer and improved profits.

Availability of needed product configurations is vital for the success our business and the **UNIT** concept does just that. It creates the essential links among hardware components, allowing for the delivery of a "ready-to-go" tailored system.

This is achieved by offering KYO control panels, cabinets, modules, transformers and power supplies as individual packages where components can be mixed and matched to create up to 20 different KYO system configurations.

NORMA4 - NORMA8

Simple and reliable for a quick intallation.

Norma4 and Norma8 control panels provide 4 and 8 zones respectively and they are available with mechanical or electronic key on board.

All versions support up to 8 readers and 8 remote keypads. This interesting control panel provides programmable input zones and function modes, auxiliary inputs and outputs, dialler facility, partitioning option and siren battery test.

FEATURES

- Available with electronic or mechanical key on board
- 4 or 8 programmable input zones (immediate, delayed, path, 24h, fire, balanced, NC, NO, Chime, Test)
- 1 24h tamper zone
- 4 groups of zones for system partitioning
- 1 programmable alarm-relay
- 1 telephone-dialler output
- 1 programmable open-collector output
- Inputs for remote arm/disarm and group bypass
- Possibility of zone bypass for patrol with automatic un-bypass
- Input for self-powered siren battery check
- Built in digital key with possibility to connect up to 8 electronic-key readers
- Possibility to connect up to 8 LED-keypads to manage the system
- 6 access codes with different priority and functions
- Easy programming via panel or from the remote keypads
- Power supply/battery-charger: 1.5A
- Housing for battery up to 12 V 7 Ah
- Power supply: 230 Vac ±10%
- Dimensions (wxhxd): 308x232x85 mm
- Remote keypad (wxhxd): 160x73x25 mm
- Weight (without battery): 1.9 Kg.

ACCESSORIES

ALISON/8L
LCD keypad with 8 zone LED's + 8 signal LED's

ECLIPSE + SAT
Proximity key reader + Proximity key

KEYPADS AND MANAGEMENT DEVICES

ALISON

ALS-S

- Smart low-profile design
- Small dimension
- 3 signal LED's
- 1 input zone
- Easy access to control panel menu
- Down flip
- Compatible with KYO series expandable control panels
- "ASNC" snatch protection microswitch (optional)

ALS-DVP

- Smart low-profile design
- Small dimension
- 4 signal LED's
- 1 input zone
- Built-in proximity reader
- Easy access to control panel menu
- Down flip
- Compatible with KYO series expandable control panels
- "ASNC" snatch protection microswitch (optional)

ALS-32LP

- LED keypad
- 32 zones LED's and 8 signal LED's
- Built-in proximity reader
- 1 input zone + 1 open collector output
- Down flip
- Compatible with KYO series expandable control panels
- "ASNC" snatch protection microswitch (optional)

ALS-8L

- LED keypad
- 16 signal LED's
- Down flip
- Compatible with KYO4, KYO8, KYO16D, Norma4, Norma8
- "ASNC" snatch protection microswitch (optional)

MIA

MIA-D / MIA-S

- Attractive design
- "High Vision" display
- 4 signal LED's
- 2 input zones (1 in MIA-S)
- Down flip
- Compatible with KYO series expandable control panels
- Optional "ASNC" micro switch for snatch protection

PROXI

PROXI

- Proximity key/card reader for indoor/outdoor use (IP34)

PROXI-CARD

- Proximity card

ECLIPSE

ECLIPSE

- Proximity key/card reader for indoor/outdoor use (IP34). Available in several different types

SAT

- Proximity key

WIRELESS SYSTEMS

VECTOR

VECTOR/RX

The VECTOR/RX system has been purpose designed to satisfy the market request for a security system that protects both the premises and its perimeters.

VECTOR/RX is able to interface between hardwired and wireless burglar systems, and thus finds its niche in installations where the consolidated reliability of hardwired detectors cannot be applied. This innovative product allows the installer to kit-out hybrid burglar systems with a wide range of wireless devices. It supports up to 32 wireless devices (31 for KY032 and KY032G) and 16 keyfobs.

It can be connected to Bentel Security's KY08W, KY08G, KY016D, KY032, KY032G, KY0100 e KY0300, control panels by means of serial bus, or to other brands of control panels by means of the apposite outputs.

The VECTOR/RX is fully compatible with all brands of control panels and offers installers maximum flexibility, and quick and easy installation.

VECTOR/RX8

Wireless receiver for KY0 security control panel with the same features of VECTOR/RX but with 8 zones.

VECTOR/BRIDGE

Vector/Bridge is a kit integrating Vector receiver together with a device that allows to connect it to different control panels. equipped with 16 open collector outputs. One of the many interesting features of this product is its memory, that provides information on events such as: low-battery, detector trouble, jamming, and also, information on alarms that occur exclusively during armed status. By means of this detailed information it is possible to expand the initial capacity of small control panels.

FEATURES

- 8 open-collector outputs for alarms
- 1 open-collector output for tamper
- 1 open-collector output for low battery
- 1 open-collector output for trouble
- 1 open-collector output for jamming
- 4 open-collector outputs for wireless keys
- Double display with 7 segments
- 1 armed/disarmed input
- 1 view and memory reset input
- 12V power supply only in stand-alone

ACCESSORIES

BPI/LINK

Vector serial link

VECTOR/RX

VECTOR/RX8

VECTOR/BRIDGE

ORDER CODES

VECTOR/RX Wireless receiver 32 zones for KY0 control panel

VECTOR/RX8 Wireless receiver 8 zones for KY0 control panel

VECTOR/BRIDGE Wireless universal interface and receiver for security panels

VECTOR/QUAD

Repeater for VECTOR/RX receiver.

The VECTOR/Quad connects to the primary keybus of a control panel and provides 4 secondary 4-wire connections for up to four wireless receivers. The VECTOR/Quad does not provide additional zones but enables the 32 zones to be distributed over a greater area.

FEATURES

- Voltage Range: 12VDC - 14VDC
- Current: 55mA, plus current draw of each receiver module connected
- Compatible receiver modules: VECTOR/RX and VECTOR/RX8
- Compatible control panels KY0100 and KY0300
- LED field
- Zone supervision
- Zone tampers, violations and restorals
- Module tampers and troubles

ORDER CODES

VECTOR/QUAD Repeater for VECTOR/RX receiver (up to 4 rec.)

WIRELESS DEVICES

ARC20
Keyfob.

TECHNICAL FEATURES

- Code combinations:1048576
- Dimensions (wxhxd): 33x58x12 mm
- Batteries: 2 Lithium batteries mod.CR2025

AMD10
Wireless pet-immune PIR detector.

TECHNICAL FEATURES

- Cover:26 beams on 4 levels, long, ledium and Short-range
- Battery: Lithium mod. CR123A

AMC30
The AMC30 is a wireless door/windows magnetic contact with auxiliary input for rollerblind detector.

TECHNICAL FEATURES

- Code combinations:1048576
- Dimensions (wxhxd): 33x58x12 mm
- Batteries: 2 Lithium batteries mod. CR123A

AMC10
Wireless magnetic door/window contact.

TECHNICAL FEATURES

- Dimensions (wxhxd): 88x31x30 mm
- Battery: Lithium mod. CR123A

ASD20
Wireless smoke detector.

TECHNICAL FEATURES

- Dimensions: base diameter 147 mm, height 52.8 mm
- Batteries: 2 Lithium batteries mod. CR123A

ORDER CODES

BENTEL SECURITY
FOR A SAFER WORLD

PROGRAMMING AND COMMUNICATING SYSTEMS

BGSM-I

The BGSM-I gives total confidence in all security and surveillance applications and is the ideal way of completing whatever system. It provides advanced communication features through the GSM network and can be used in numerous telematic applications.

BGSM-I functions:

BACKUP LINE (SIMULATED LAND LINE)

The BGSM-I simulated land line feature provides traditional telephone devices with a backup line. The BGSM-I will switch to the simulated line in the event of land line trouble (line down). Under normal circumstances, neither the BGSM-I nor the connected telephone device will require programming.

SMS DIALLER

The SMS dialler function manages 8 telephone numbers and, when the status changes occur on its 4 inputs, provides the respective message. The SMS dialler function also sends trouble alert, periodic transmission and pay-as-you-go balance messages (pre-paid SIM cards).

HOUSEHOLD APPLIANCE MANAGEMENT VIA SMS

The BGSM-I can recognize the incoming SMS messages (with password protection) and turn On/Off the 4 outputs available for this function.

GATE CONTROL FUNCTION

The BGSM-I provides 95 programmable telephone numbers. On recognition of an incoming call from any of these numbers, the device will activate the respective output ("Gate Control") without answering the call. This feature is cost free.

CONTACT ID DIALLER

The BGSM-I sends input, PSTN line and power supply status reports to central stations using Contact ID reporting format, and also sends periodic messages. These communications can be sent to 4 telephone numbers.

The BGSM-I is protected against tamper and provides tamper signalling on two terminals. This device can be programmed and controlled via a user-friendly PC software application (accessory item).

ACCESSORIES

ADP1512

AC adapter 100 - 240 Vac input
13.8 Vdc output

ORDER CODES

BGSM-I/EU GSM dialer and interface
900/1800MHz

BGSM-I/AM GSM dialer and interface
850/1900MHz

FEATURES

- Simulates PSTN line (backup line)
- Compatible with whatever control panel
- Switches automatically to GSM network in the event of PSTN trouble (line down)
- 8 telephone numbers (max. 20 digits) for SMS dialler
- 4 telephone numbers (max. 20 digits) for Contac ID communicator
- 95 telephone numbers (max. 20 digits) for remote control of the outputs
- 4 inputs for SMS Dialler and Contac ID communicator activation with 2 SMS messages, user codes and Contac ID event for each input
- Programmable Input-activation polarity
- Send SMS and Contac ID "Trouble" reports
- Send SMS and Contac ID "Periodic" reports
- Pay-As-You-Go balance report
- 4 programmable open-collector outputs (monostable or bistable)
- Remote control by means of SMS message to BGSM-I
- Remote control feedback (SMS message of ring)
- Outputs can be used for device status signals
- Incoming and outgoing call management
- SIM card can be programmed via GSM cellphone or software application
- Dimensions (wxhxd): 138x224x55 mm
- Weight (without battery): 900 gr

BGSM-A

BGSM-A is the state of the art for the integration between security systems and GSM communication. It can be simply and cost-effectively integrated with all alarm systems, and can operate as a GSM interface, voice dialler, SMS dialler and remote control via SMS.

The BGSM-A Interface facility allows ordinary two-wire PSTN telephones to switch to the GSM network in the event of PSTN Trouble (line down). The simulated line, provided by the BGSM-A, supplies the line and ring voltage, thus allowing the hardwired telephone device to operate as a wireless device. The BGSM-A can also operate as a 4 channels SMS dialler. In fact, it provides 4 inputs (channels), each able to manage 2 text messages (SMS), that will be sent when the channel status changes.

The 4 input channels can also be used to activate the GSM voice dialler facility. The BGSM-A can be used in numerous telematic applications, and it is the perfect way to complete a security system. Available in two models: BGSM-A/12 powered by 13,8Vdc; BGSM-A/230 powered from mains.

B-TEL99

The B-TEL99 voice telephone dialler is the best way to complete an installation that requires a voice dialler.

It has 2 alarm channels, and is able to monitor 2 distinct events (e.g. the burglary alarm and fire alarm). The B-TEL99 offers advanced management of alarm messages, the recording time (32 seconds) can be divided into one, two or three messages as required.

The messages are recorded on a solid-state memory. The quality of recorded messages may be checked on the built-in loudspeaker. By dialling the user code on the telephone keypad, the user who receives an alarm call from the B-TEL99, can listen-in on the environmental sounds picked up by the dialler microphone, and consequently, decide consequently on the action.

The user code can also interrupt the alarm calls from the B-TEL99 keypad. The programmable installer code accesses programming, which is made quick and easy by the alphanumeric keypad and LED display. The B-TEL99 event logger allows viewing of the result of the last 255 calls.

The attractively designed plastic box is perfect for on-view installation.

36

FEATURES

- Supplies a simulated PSTN line
- 4 Inputs for the activation of voice and SMS dialler (optional NC2/VOX board required for voice dialler)
- 2 SMS messages available on each input
- Programmable Voice/SMS dialler-channel activation polarity
- 8 telephone numbers available for the Voice/SMS dialler facility
- 5 outputs open collector (150mA)
- Output control via SMS
- Outputs can be used for status and troubles signalling
- Programmable output-activation polarity
- Management of incoming and outgoing calls
- Incoming and outgoing call LED's
- Signal strength indicator
- Display for device status signalling
- Includes prefix when operating in Interface mode
- Dual-band
- SIM card programmable via any GSM cellphone, or via a specific software application (runs under Windows)
- Calls register available via software
- Dimensions antenna excluded (wxhxd): 141x233x59 mm
- Weight (without battery): 1,29 Kg (BGSM-A/12); 1,6 Kg (BGSM-A/220)

ACCESSORIES

NC2/VOX

Voice board: 8 messages for a total of 90 seconds

GSM-LINK

Serial link for GSM cellular net interface

ORDER CODES

BGSM-A/12 12Vdc GSM dialler and interface

BGSM-A/230 GSM dialler and interface powered from mains (230 Vac)

37

FEATURES

DIALLER

- 2 alarm channels with priority management
- 7 programmable telephone numbers for each channel
- 15 digits available for each telephone number: allows pauses of 1 or 5 seconds
- Possibility to record either one, two or three messages: 1 message of 32 seconds max. common to both channels; 1 message of 16 seconds max. for each channel; 1 message of 16 seconds max. common to both channels and 1 message of 8 seconds max. for each channel
- Repeats alarm message for 20, 40, 60 or 80 seconds
- Repeats the call cycle up to 5 times
- Terminal for call cycle interruption
- Possibility to stop alarms via keypad by means of a PIN code
- Programmable installer code for access to programming
- Possibility to program alarm call activation by means of positive drop or negative command

TELEPHONE LINE

- Bypassable "Answer check"
- Storage of the last 255 calls
- Remote listen-in and interrupt alarm-callcycle by entering user code on telephone keypad
- Protection against accidental polarity inversion of the battery
- Bypassable dial-tone check
- Electronic telephone-line interface
- Protection against overvoltage
- Open-collector output for telephone line cut or fault signalling
- Tone or pulse dialling

INTERFACE

- Digital message recording/playback
- Built-in loudspeaker for recorded message playback
- Single digit LED display
- Alphanumeric keypad for operating control
- Solid-state memory for programmed data storage

BOX

- Tamper protection
- Compartment for 12 V 1.2 Ah battery (not supplied)
- Power supply: 13.8 Vdc $\pm 10\%$
- Dimensions (wxhxd): 132x220x62 mm
- Weight (without battery): 1.2 Kg

B-TEL 99 Dual channels telephone dialler

GT-COM

GT-COM is the Bentel Security solution for the increasing request of an all-application device that manages digital communications to central stations.

In fact, the GT-COM solves the problem of data transfer from sites that are not provided with control panel communicators. This flexible device is perfect for trouble signalling in lifts, water flow systems and storage tanks, etc. The GT-COM is also the most cost-effective time-saving way of upgrading systems that require the communicator function. The GT-COM has 8 input channels that manage 8 different event types and relative resets. It supports the most widely used reporting protocols and manages up to 8 telephone numbers. It can be programmed via the GTCOM software application (runs under Windows 3.1 or higher). The software application, with graphic interface, provides a fast user friendly way of programming the device, via an RS232 port. The programmed installation data can be saved in your database, for retrieval and reuse.

ORDER CODES

GT-COM 8 channels digital communicator

B-NET

NEW

B-NET is an expander board for KYO 100, KYO 300 control panels. B-NET will allow the connection of control panels to the LAN to control them from a remote location.

Using the B-NET, you can communicate alarm signals and all control panel events (SIA on B-NET protocol) on LAN and communicate the same signals to a programmable e-mail address. B-NET can be connected to LAN programming a static IP address or using DHCP.

Using the Bentel Security Suite software, you can do the same operations either on the Net or via serial port. With a public IP address you can do teleservice and telemonitoring from any region in the world on internet.

INTERNET COMMUNICATOR (KYO 100/300)

- LAN/WAN Internet protocol
- 128Bit encryption (secure)
- Version 1.30 of Kyo100 and 300
- B-Net connect to panel via RS232
- Up/download and event transmission
- Alarm reception via e-mail or to system III receiver
- 4 stand alone inputs, expandable to 12
- 2 programmable outputs

FEATURES

- Nominal voltage 12Vdc
- Alarm current 250 mA
- Min. (max) supply voltage 10 Vdc / max 13,8 Vdc
- Temperature range 0°/+49 C°
- Dimensions (wxhxd): 150x339x108 mm
- Weight 1.5 Kg

ORDER CODES

B-NET Expander board for KYO 100 and KYO 300 control panel

FEATURES

- 8 independent channels
- Programmable trigger signal edge
- 8 programmable telephone numbers with individual account code
- Supports the most widely used protocols: 10, 14, 20, 40 Bps, Contact ID
- 2 distinct signals for power trouble
- Auto-test call
- First call delay
- Fully programmable from PC via RS232 serial-interface
- PSTN Line Interface
- Software application (runs under Windows)
- Dimensions (wxhxd): 91x15x85 mm

B-MOD

B-MOD is a high quality Modem of maximum reliability, intended for use with Bentel Security products.

The B-Mod provides teleservice management (via the management software application) on all Bentel Security control panels. B-Mod can operate on two telephone lines: priority and backup. In the event of trouble on the priority line the B-Mod will switch automatically to the backup line. B-Mod is compatible with Bentel Security protocols (150 baud, 1200 baud). The streamlined design of the B-Mod allows installation in all ambients.

B-MOD/RX modem is dedicated to Telemonitoring (control of remote security system).

It supports 10 and 14 bps and Contac ID protocols, and houses a 12 Vdc 1.2 Ah max. battery (not supplied) for backup power during blackout. The B-Mod/RX event memory holds 500 events, and allows all events to be recorded during communication problems with the modem management software (for example, during blackout or when the program is not running, or is busy communicating with another modem). The B-Mod/RX Central Station can analyse event data transmitted by remote control panels with digital communicators. Data sent by control panels to the B-Mod/RX modem will be transmitted to the computer. The WinBCS software (runs under Windows) displays all the customer's data, in particular the customer's details, maps and icons that will allow the operator to understand in real-time exactly what is happening on the customer's premises.

The Modem has 8 programmable open-collector outputs that can be activated by a set of events. The NC2/VOX board (accessory item) can manage 8 Voice calls and 8 telephone numbers. Each voice message can be associated with one or more events. The messages will be sent in response to incoming events, or when the operator fails to acknowledge the transmission.

SECURITY SUITE

The Bentel Security Suite software integrated environment has been developed to meet requests of local and remote management of burglar control panels, telephone diallers and access control systems. It will allow you to program, control and enhance the performance of any Bentel Security system that is equipped with a local or remote computer Interface.

The customer database and print facilities will keep you in touch and informed. It is surely the best way to achieve the maximum from your Bentel Security installation.

BIS

BIS is Bentel's most important and powerful "Systems Integrator Kit". It provides a "DLL" for supervision system integrations, and video Map software integrations. BIS allows the installer to expand the initial capacity of all Bentel Security systems. Now, all old and new Bentel Security installations can be integrated with higher supervision systems. In this way, with appropriate software Bentel Security control panels can be connected to a PC for system supervision through video maps. BIS takes Bentel Security products into the powerful world of communications.

SIRENS

LADY **NEW**

Self powerd siren Lady is a perfect mix between an innovative design and a state of the art technology.

All the functions are managed by a microprocessor that guarantees operating precision. Lady has three inputs for the different sounds available: this feature extends the use of the siren considerably. It is possible to select a siren sound, this can be useful both for distinguish one installation from the other, or to assign different sounds to different types of alarm or places. The flasher is managed separately by a specific input, when sound emission is not required. Compatibility with all alarm control panels is guaranteed by the programmability of the polarity of the inputs, and alarm signal polarity.

In addition to the already high standard of the Bentel Security sirens, LADY is protected against foam injection tamper, the latter is particularly effective due to the use of a dual detector.

The battery is monitored continuously by the siren microprocessor, which checks the battery level and efficiency, and signals the status on the respective terminal. If the battery is low, the flasher will be inhibited automatically, and the remaining power will be kept for sound emission. The materials used for LADY (polycarbonate box with tropicalized metal interior) guarantee an almost unlimited resistance to the most adverse weather conditions.

LADY

FEATURES

- Strong polycarbonate box, resistant to the most adverse weather conditions
- Tropicalized-steel inner cover
- 3 inputs for alarm signalling on siren sounder and flasher
- 1 input for alarm signalling on flasher
- Standard inputs for all types of control panels
- Modulated frequency sound emission, with the possibility to assign different sounds to the alarm inputs
- High performance magnetodynamic exponential horn
- Protected against tamper, snatch, damage to the flasher and wire cutting
- Foam injection tamper device
- Programmable maximum alarm-time
- Test circuit for battery level and efficiency, with flasher cut-out on low battery
- Drill pattern for easy installation
- Complies with CEI 79-2/2nd Ed. 1993
- Power supply: internal battery 12 Vdc, 7 Ah
- Alarm current: 1.4 A (max. 2.8 A)
- Sound level: 103 dBA (3 mt.)
- Fundamental frequency: 1475 Hz
- Temperature range: -25 ÷ +55 °C
- Dimensions (wxhxd): 208x252x98 mm
- Weight (without battery): 2.5 Kg

ACCESSORIES

LEDOPT
LED option board for sirens for auxiliary signal of the system's status.

CALL

The Call self-powered siren is a landmark in Bentel Security range of products.

Made in polycarbonate and internally reinforced in metal, it guarantees a high level of security and is totally weatherproof. The Call is protected against tamper, snatch and wire cutting, and is equipped with a flasher cutout circuit, that is activated automatically by low battery conditions. The Call siren provides 2 trigger inputs for the sounder and flasher and a further tone option. This is useful to differentiate control systems installed in the same area. The tone option can also be used to differentiate alarm types (burglary, flooding, gas, etc.) and places (office, warehouse, garage, etc.). The maximum alarm time of the call can be programmed to match customer/site requirements. Call-F versions guarantee a further protection against foam injection and are equipped with 1 visual alarm and 1 audio alarm to provide a great flexibility of use.

LED option board for sirens for auxiliary signal of the system's status.

WAVE

This high performance internal siren has been especially designed for sound and visual warning in the event of intrusion.

Four versions are available: with or without flash; with or without back-up battery (self-powered). The visual signals emitted by the strobe's high intensity Xenon tube can be seen from all angles, thus providing maximum visual coverage. The smart, low-profile siren blends with all environments, making it ideal for hotels, hospitals, cinemas, offices and households.

48

FEATURES

- Operating voltage 12 Vdc
- Strobe current draw (mean value) 135 mA
- Horn current draw (mean value) 90 mA
- Sound output volume 104 dBA \pm 3 dB @ 1 m
- Candela 60 cd
- Size (wxhxd): 126x132x53 mm
- Protection class IP31
- Operating temperature 5 \div 40 °C
- Weight: 245 gr

FOR A SAFER WORLD

**DETECTORS AND
PHOTOELECTRIC
BEAM DETECTORS**

DT800

NEW

The DT800 is a dual technology device that combines a sensitive microwave detector and a reliable infrared detector in a smart container. The combination of these two technologies allows the DT800 to handle those situations that normally put single technology detectors into a critical position.

The use of a microprocessor for the digital treatment of alarm signals also implements functions such as the functioning mode AND or AND/OR, the possibility of programming the number of pulses required to generate the alarm and the anti-masking that generates a tamper when one of the two detectors is masked. The DT800 can be wall, corner or side mounted, and, thanks to an optional base, also on surface wiring. The DT800 is available with different combinations of the following characteristics, so as to be sweetable for any particular type of installation.

LOOK DOWN

The Look Down extends the coverage of the DT800 up to the wall on which it is mounted, preventing an intruder who is sliding along the wall from eluding surveillance.

ANTI-MASKING

The anti-masking generates a tamper when one of the two detectors has become inefficient, therefore providing protection when the security system is disarmed.

MICROPHONE

It is possible to hear sounds, via telephone, in the environment where the DT800 is installed, with predisposed control panels, by means of integrated microphone, so as to verify the signal of an alarm.

AND/OR FUNCTIONING MODE

The AND/OR functioning mode allows the DT800 to generate an alarm even when one of its detectors generates twice as many pulses with respect to those programmed for the functioning mode AND, so as to resolve situations where one of the two detectors is not able to signal the intrusion.

PET IMMUNITY

Pet immunity allows the DT800 to be used in areas frequented by our four-legged friends without limiting their freedom of movement when the security system is armed.

All the detectors of the DT800 series are available in two functioning frequencies, so as to install two detectors in the same room, without them interfering with each other

FEATURES

- X-band microwave radar
- Two radar frequency options:
 - 10.525 MHz
 - 10.515 MHz
- Dual element PIR
- 12mt range
- 80 degree horizontal coverage
- NC 100mA solid state output
- Tamper
- 10-15Vdc operation
- 15mA (25mA max)
- Three alarm/walk test LED's (visible from front)
- Optional adjustable swivel bracket
- Base with conduct groove
- Optional integrated microphone
- Alarm memory
- Remote radar switch OFF
- Remote walk-test LED's switch OFF
- Adjustable for
 - Microphone sensitivity
 - PIR range
 - Microwave range
- PET immunity

AVAILABLE IN THE FOLLOWING VERSIONS:

- DT800-PM** Dual technology motion detector with "Pet immunity" function

LB612 - LB812

Dual technology sensor (passive infrared and microwave) neat, compact and easy to install.

Alarm analysis by means of microprocessor and programmable pulse-counter. AND function mode to optimize the immunity to interference, and AND/OR function mode to protect against blinding of one of the sensors. Alarm memory and separate sensibility adjustment for both sensors. Wall brackets for corner and angled mounting, suits all possible positioning needs. Screw on front cover.

The economical LB812 model is not equipped with a microprocessor, and is provided with the AND function only.

MC712

The MC712 is a combined mirror optic PIR and glassbreak or rollerblind detector interface especially designed for unfriendly applications.

Highly reflective precise mirror optics transfer a remarkable level of IR energy to the sensing components to deliver unbeatable detection performance with exceptionally low false alarm rate. The microprocessor architecture allows direct attachment of a glassbreak or rollerblind detector to provide single placement IR and shockwave detection.

Selectable alarm threshold for consistent performance and reliability in hostile environments. Accurate look-down cover: night mode (for rollerblind only). Local and remote control of visual alarm signalling on the walk-test LED. Differentiated alarm memory function provides local visual indication of alarm-cause on the walk-test LED. Elegant low profile housing.

54

FEATURES

- **LB 612:** approval P.P.T.T. n.ISPT/2/2/96/006
- **LB 812:** approval P.P.T.T. n.ISPT/2/2/96/007
- Infrared view by means of 24 beams on 4 levels
- Microwave view angle: 90°
- Range: 12 mt
- Microwave stripline unit working in X band
- Available with microwave frequency at 9.9 GHz or 10.5 GHz
- Voltage: 10 ÷ 15 Vdc
- Supply current: 20 mA
- Operating temperature: -10 ÷ +50 °C
- Overall size (wxhxd): 60x105x44 mm
- Weight: 200 gr

ORDER CODES

LB612DN

Dual technology infrared and microwave sensor, 24 beams on 4 levels AND/OR function.

LB812DN

Dual technology infrared and microwave sensor, 24 beams on 4 levels AND function.

FEATURES

- Mirror optic PIR
- Glassbreak or rollerblind detector interface (only MC712-S model)
- Microprocessor technology
- Multilevel digital signal processing for accurate detection of human IR over a broad range of temperatures
- Look-down cover
- Night mode
- Differentiated alarm memory
- Selectable alarm threshold
- Easy installation
- Operating voltage 10 ÷ 15 Vdc
- Protection class: IP50

MC712-E

NEW

The MC712-E is an up-to-date mirror optic PIR with look-down cover.

Highly reflective precise mirror optics transfer a remarkable level of IR energy to the sensing components to deliver unbeatable detection performance with exceptionally low false alarm rate.
Selectable alarm threshold for consistent performance and reliability in hostile environments. Accurate look-down cover. Discreet low profile housing.

VISUS99

Passive infrared motion detector with look-down cover.

This small well-designed detector may be wall mounted (with or without the bracket), corner mounted or mounted on a swivel which is easily adjustable to offer the required cover. Available with four different types of lenses: volumetric, corridor, long range and curtain.
Dual pyroelectric sensor assures reliability even in difficult environments.
Manual adjustment of the alarm threshold, and thermal compensation for operating uniformity at different temperatures. The built-in microphone provides listen-in function (only "MIC" model). Screw-on front cover.
Complies with CEI standard CEI 79-2 2nd Ed.1993 level 1.

56

FEATURES

- Mirror optic PIR
- Look-down cover
- Night mode
- Selectable alarm threshold
- Easy installation
- Operating voltage 10 ÷ 15 Vdc

EXON

Exon is a simple infrared suitable for use in domestic and commercial buildings.

This low profile design detector is easily mounted to walls, ceilings and corners, and can also be fitted to a swivel mount (accessory item) for easy alignment. Available in volumetric, corridor, long range and curtain lens versions. Dual pyroelectric sensor ensures reliability in difficult environments. Equipped with fine trimmer for alarm threshold and thermal compensation adjustments for operating uniformity at different temperatures. Exon has 3 LED's: 1 to show alarm condition and the other to provide local visual indication of environmental noise (EMI and other).

MB2012

Valid technology for a great reliability.

MB2012 utilizes precision designed mirror optics with advanced microprocessor control to deliver the ultimate in IR motion detection and false alarm immunity. It comes with wall, corner and swivel-mount brackets for maximum flexibility in detector location. The frontplate is secured by a screw.

FEATURES

- Highly reflective, precise mirror optics
- Digital signal analysis for consistent detection throughout the coverage pattern
- Multilevel signal processing for accurate detection of human IR over a broad range of temperatures
- Sensitivity adjustment to configure the detector for hostile environments
- Swivel bracket for maximum flexibility in detector location
- Operating voltage 9.5 ÷ 14 Vdc
- Standby current: 15 mA
- Protection class: IP50
- Size (wxhxd): 60x110x40 mm
- Weight: 100 gr

GB08

Designed to detect the sounds produced by the shattering of framed glass.

High-performance microphone delivers exceptional sound detection. Dynamic signal processing provides accurate detection of plate, laminated, wired and tempered glass types at up to 8 metres. The GB08 can be wall or ceiling-mounted.

FEATURES

- High-performance microphone
- Sensitivity adjustment
- Digital signal analysis provides exceptional false alarm immunity
- Excellent RF immunity
- Accurate detection of framed plate, laminated, wired and tempered glass types
- Easy installation
- Operating voltage 9.5 ÷ 14 Vdc
- Standby current: 15 mA
- Protection class: IP50

RAY

Bentel Security Ray photoelectric beam detector is the perfect combination of elegant design and state-of-the-art electronics.

Rugged housing defeats distortion to deliver consistent performance in extreme temperature conditions. Low profile design (175 x 70 mm) allows this unobstructive detector to be at home in indoor and outdoor environments.

RAY60 provides 60 mt coverage; RAY100 provides 100 mt coverage. Enhanced installation flexibility combined with Easy beam alignment guarantee trouble-free installation.

Requires no synchronism wiring, as each beam is recognized by a differentiated optical code. Microprocessor controlled for unmatched detection performance with exceptionally low false alarm rate. Durable resin housing and spareness of anchor knockouts extend immunity to strong sunlight.

FEATURES

- Photoelectric beam detector
- Digital CPU for greater stability
- Selectable 4 channels beam frequencies
- Signal LED for system's status
- Lighting and surge protection
- Alarm LED
- Dry contact relay output
- Tamper output
- Beam adjustment: horizontal 180° (±90°), vertical: 20° (±10°)
- Supply voltage: 10 ÷ 18 V
- Current: receiver < 43 mA; transmitter < 43 mA
- Weight: receiver 348 gr; transmitter 335 gr
- IP rating 54

ORDER CODES

POWER SUPPLIES AND BATTERIES

BXM12

Power supply.

FEATURES

- Microprocessor controlled switching power supply
- Bus-in and bus-out totally uncoupled (galvanically isolated and regenerated, only in “-B” versions)
- Input voltage: 230 Vac ±10% 50/60 Hz
- Stability: ±1%
- Continuous monitoring of switching power supply with cut out in the event of fault or irregularity
- Continuous monitoring of the battery with cut out in the event of fault or irregularity
- Test for battery presence, level and the efficiency
- 3 independent outputs protected by thermal fuse
- Tamper and snatch switches
- 2 Open collector outputs for failures signalling (only in “-U” versions)
- Battery compartment: one battery 12 Vdc - 17 Ah
- Compatible with thermal probe KST

BAQ

Switching power supply battery-chargers of BAQ series are protected against short-circuit and overload, and can be fitted with a thermal probe that will allow the device to detect temperature rises, and drop the output voltage accordingly to avoid battery overheating.

FEATURES

- Power supplies battery chargers
- Small dimension
- In 230 Vac ±10%, 50/60Hz
- Complies with EN60950
- Insulation class I
- Stability > 1% with full load
- Protected against short-circuit and overload
- Compatible with thermal probe KST

ACCESSORIES

BX
Suitable for power supplies: BAQ35T12, BAQ60T12, BA2C.
Metallic box (wxhxd): 196x330x95 mm

BXM
Suitable for power supplies: BAQ35T12, BAQ60T12, BA2C.
Metallic box (wxhxd): 241x349x93 mm

ORDER CODES

- BAQ15T12** Switching power supply battery charger 1,5A 13,8V
- BAQ35T12** Switching power supply battery charger 3A 13,8V
- BAQ60T12** Switching power supply battery charger 5A 13,8V

BA2C

Linear power supply battery charger.

FEATURES

- Input voltage: 230 Vac ±10% - 50/60 Hz
- Output voltage: 13.8 Vdc
- Max current 2 A
- Complies with EN60950
- Insulation class II
- Stability > 1% with full load
- Overload protection
- Short-circuit protection
- Dimensions (wxhxd): 195x85x80 mm
- Weight: 1.4 Kg

ORDER CODES

- BA2C** Linear power supply battery charger 2A, 13.8V

ARTICLE	OUTPUT (Vcc)	CURRENT (A)	DIMENSIONS (wxhxd)	WEIGHT (without batt.)
BXM12/30-B	13,8	3 max.	240 x 348 x 97 mm	2,8 Kg
BXM12/50-B	13,8	5 max.	240 x 348 x 97 mm	2,9 Kg
BXM12/30-U	13,8	3 max.	240 x 348 x 97 mm	2,8 Kg
BXM12/50-U	13,8	5 max.	240 x 348 x 97 mm	2,9 Kg

ORDER CODES

- BXM12/30-B** Switching power supplies 13,8V 3A with bus-in bus-out
- BXM12/50-B** Switching power supplies 13,8V 5A with bus-in bus-out
- BXM12/30-U** Switching power supplies 13,8V 3A with 2 open collector outputs for failures signalling
- BXM12/50-U** Switching power supplies 13,8V 5A with 2 open collector outputs for failures signalling
- KST** Thermal probe kit

BATTERIES

MAINTENANCE FREE
No need to check specific gravity or add water.

SEALED CONSTRUCTION
Ensures that no electrolyte leakage can occur from terminals or cases.

LONG CYCLE LIFE
Over 1,000 discharge/recharge cycles.

LONG SHELF LIFE
Up to one year at an ambient temperature of 68° (20°C).

HEAVY DUTY GRIDS
Constructed of lead-calcium alloy to enhance performance and service life in both cyclic and floating applications, even in deep discharge conditions.

OPERATING TEMPERATURE RANGE
Broad operating temperature range of 5° to 122°F (-15° to 50°C) permits flexible system designs and battery locations.

POSITION FLEXIBILITY AND LEAKAGE FREE
Sealed construction and use of absorptive mat separators permits battery operation in any position without loss of electrolyte or service life.

LONG FLOAT LIFE
3 to 5 years float life under trickle charge.

HIGH RECOVERY CAPABILITY
Even after deep discharge.

LOW GAS GENERATION
Battery design effectively controls generation of gas and allows recombination within the battery of 99% of gas generated during normal use.

LOW PRESSURE VENTING SYSTEM
Ensures that there is no excessive buildup of gas in the battery. Operating at 7-10 psi (48-69 kPa), the system automatically releases excess gas if pressure rises above normal. Resealing is automatic once pressure has returned to normal.

BENTEL SECURITY
FOR A SAFER WORLD
